2. Glossary

Term / Abbreviation	Explanation / Description
SmartKSeF	A system that mediates data exchange between source systems and the Ministry of Finance's KSeF system. It consists, among others, of the Taxpayer Portal and the Broker, provided by Exorigo-Upos.
KSeF	National e-Invoicing System. Made available by the Ministry of Finance.
Taxpayer Portal	A user portal that enables service and access to data collected in SmartKSeF.
Broker	A service responsible for communication between source systems and the KSeF system.
UPO	Official Receipt Confirmation, issued by KSeF after completing a session of invoice registration.
AD/AAD	Azure Active Directory – a solution provided by Microsoft used for securing access to resources and data (via authentication) and centrally managing identities and application access.
Tenant	A group of entities (e.g., a capital group or franchise group) identified by a tenant number. All data—such as entities, users (and their roles), and tokens—are defined within a given tenant and cannot be shared between tenants.
Entity	Identified by a tax ID number (NIP), it represents a company/taxpayer – the owner of the entity in the KSeF context with "read/write invoice" access.
Token	KSeF authorization token, generated in the Ministry of Finance system – it carries information about the permissions an entity has in KSeF. It is one of the authorization methods in KSeF, used in SmartKSeF for reading or writing invoices by the entity.
Profile	A profile (role) – a set of permissions used to assign access rights to a Portal user. Profiles are defined per tenant and shared between entities.
User	A person logging in with an email from the tenant's domain, assigned to one or more entities and profiles.
Schema FA(2)	An updated version of the logical structure template for e-Invoices, adapted to the requirements of the VAT Act.
Client's HR Department	A user from the client's organization who defines employee responsibilities but does not directly operate the SmartKSeF system.

3. Change History

Version	Date	Change Author	Description of change
1.0	2024-01-26	Aleksandra Olczak	Initial Release
1.1	2024-04-22	Michał Sosnowski	Document update
1.2	2024-05-29	Paweł Ślanda	Document update
1.3	2025-05-20	Grzegorz Owsianka	Document update
1.4	2025-06-02	Grzegorz Owsianka	Document update ("Classifications")

4. Broker Operation

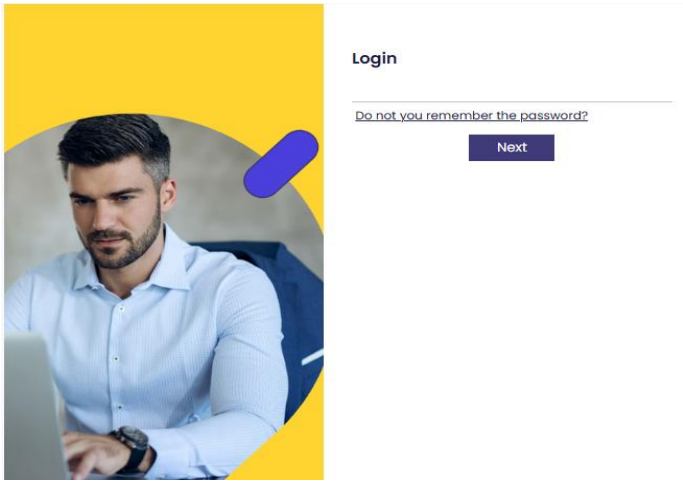
A sales invoice (outgoing) is transmitted from the source system to SmartKSeF, where it undergoes validation. If the validation is successful (invoice status ACCEPTED), SmartKSeF forwards the invoice to KSeF (invoice status SENT).

If the invoice fails validation in SmartKSeF (when the submitted document does not comply with the FA(2) schema, or when the invoice complies with the FA(2) schema but contains errors), an error message is sent back to the source system, and the invoice is not forwarded to KSeF (invoice status REJECTED).

A purchase invoice is retrieved by the SmartKSeF system and then automatically assigned and forwarded/shared to the source system. In cases where automatic assignment to the source system is not possible, SmartKSeF will allow manual assignment of the invoice on the Taxpayer Portal (this functionality is currently under development).

5. Login

The Taxpayer Portal is accessible for a given entity via a specific web address (provided within the taxpayer's domain or at a designated URL). After clicking the correct address, a login window appears, displaying a form that allows the user to enter login credentials or authenticate using AD. If the user is not registered, they must register in order to use the Taxpayer Portal's functionalities.



After entering the login and password, the user confirms the credentials by clicking the “Log in” button. In the case of domain-based login, the tenant is identified based on the email address domain (login).

6. New User Registration

Registration of a new SmartKSeF user is done via the “Register now” link on the login page, which
is dedicated per client/tenant.

For tenants that are not integrated with AD, the login page address may be differ from that of clients integrated through AD. New user registration is carried out either using AD or via an email address. The “Register now” button redirects the user to the registration page.

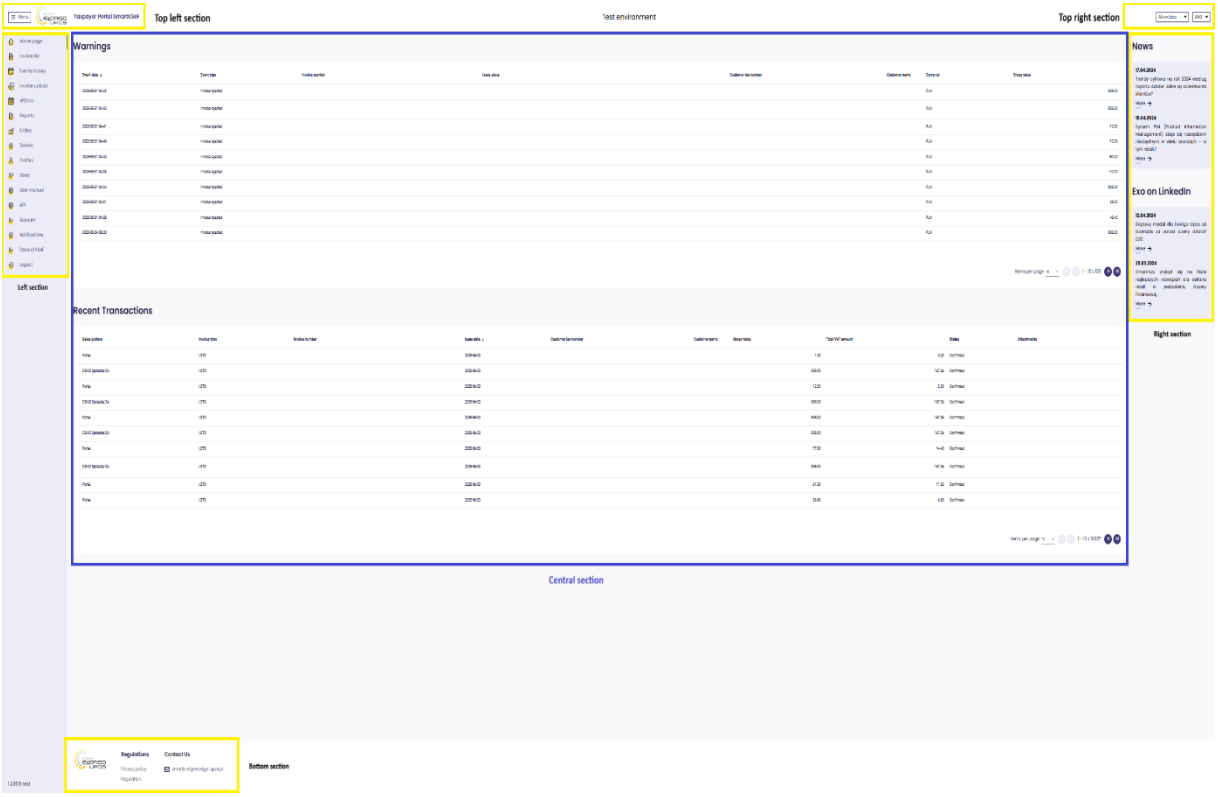
With the use of AD:

1. The user initiates an attempt to log into the SmartKSeF system by selecting the appropriate login/authentication method via the Client’s AD.
2. The user is redirected to the Client’s AD system along with the appropriate parameters.
3. The Client’s AD system verifies whether SmartKSeF is authorized to use this authentication method.
4. The user confirms their identity in accordance with the Client’s domain policy.
    - In case of failed verification, the process is terminated.
    - In case of successful verification, the registration process continues.
5. A user account is created in the SmartKSeF system, including the login (email address) and personal details (first and last name, depending on AD configuration). The account has no permissions, allowing only login to the SmartKSeF system, where the user sees only the start screen without access to any system functionalities or data.
6. After registering a new user, SmartKSeF sends an email to the Admin/HR department address assigned to the tenant (email domain). The permission assignment process is an internal process on the client's side.
7. The user receives a notification about the account creation in SmartKSeF along with information that system permissions must be granted by an administrator. Once permissions are granted, the user receives a confirmation notification.
8. The Client Administrator searches for the appropriate user and assigns the required permissions by specifying the system role and access scope, as well as providing the employee’s identification details.

Using an email address:

1. The user selects the account registration option and provides the required information (login – email address, personal details – first and last name, and sets a password).
2. SmartKSeF verifies the provided data by checking whether the email address belongs to the tenant's domain and whether a user with the same details already exists in the system. If the verification fails, the process is interrupted and must be repeated.
3. SmartKSeF sends a verification code to the provided email address using Azure functionality (if the email already exists in the database or is invalid, no verification code will be sent).
4. The user enters the received code.
5. The code is verified, with an option to resend the code:
    - If the verification fails and no further attempts are made, the process ends.
    - If the verification is successful, the registration process continues.
6. A user account is created in the SmartKSeF system, including the login (email address) and personal details: first and last name or a name, depending on the registration page configuration. This account does not have any permissions and does not allow the user to log into the SmartKSeF system.
7. Account creation confirmation – The user receives an email notification about the account creation in SmartKSeF and information that system access rights must be granted by an administrator.
8. Administrator receives user information – The Client Administrator searches for the appropriate user.
9. Assigning user permissions – The Client Administrator assigns the required permissions by specifying the system role and linking the user to an entity. It is possible to use a filter for "users without permissions."
10. Confirmation of permission assignment – The user receives a notification that they can now use the system.

7. Home Page



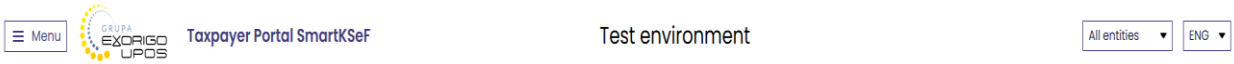
The home page is divided into several sections:

- **Top left section** – a fixed part, visible from anywhere in the application, contains:
    - Menu icon
    - Exorigo-Upos logo
    - Application name
- **Left section** – a fixed part, visible from anywhere in the application, a collapsible/expandable menu allowing navigation
- **Central section**:
    - **Alerts** – A list of the latest warnings/errors
    - **Recent transactions** – A list of the latest transactions
- **Top right section**:
    - Entity selection
    - Language selection (PL/ENG)
- **Right section**:
    - **News** – messages fetched from the Exorigo-Upos website

- **Exorigo-Upos on LinkedIn** – posts fetched from LinkedIn, shared by Exorigo-Upos

- **Bottom section**:
  - Logo
  - **Terms and policies** – contains links to:
    - Privacy Policy
    - Portal Terms and Conditions
  - **Contact us** – link to contact

7.1. Header



The header is a fixed element, accessible from anywhere within the Taxpayer Portal. In the top left section, the menu, application name, and Exorigo-Upos logo are visible. Clicking on the Exorigo-Upos logo redirects the user to the Exorigo-Upos S.A. – IT Solutions for Business I IT Consulting page.

The available language versions of the Taxpayer Portal are Polish (PL) and English (ENG).

In the top right section, you can select the entity and language from a dropdown list.

Entities available on the list are presented by their Tax Identification Number (NIP) and sorted alphanumerically.

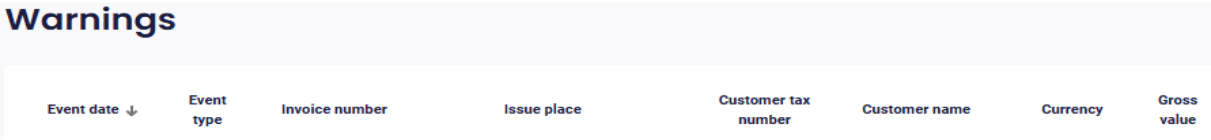
7.2. News

In the top-right section, excerpts of news articles published on the Exorigo-Upos website are displayed, along with their publication dates and an option to access the full articles (by clicking on "More").

7.3. Exo on LinkedIn

Below the news section, also on the right-hand side, there are excerpts of articles along with their publication dates and the option to access the full articles on the linkedin.com portal (accessed by clicking on "More").

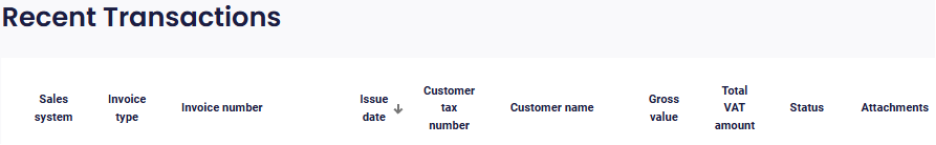
7.4. Warnings (from the last 7 days)



In the central section of the homepage, a list of invoices rejected by SmartKSeF is displayed (invoices that conform to the schema but were rejected due to errors and are no older than 7 days). The invoice list can be sorted by columns by clicking on the column headers. By default, the 10 most recent invoices are displayed. Clicking anywhere on a row opens a preview of the selected invoice.

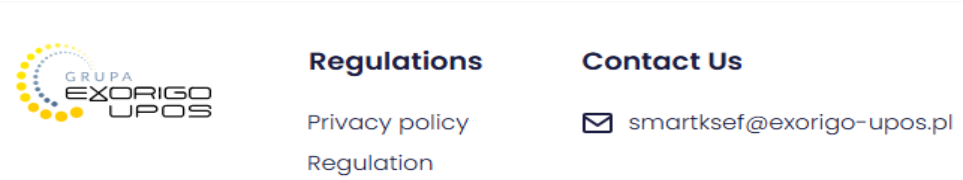
The user can choose how many rows are visible on the page using a dropdown menu located below the table (10, 20, 50, or 100). The list of rejected invoices is paginated.

7.5. Recent transactions



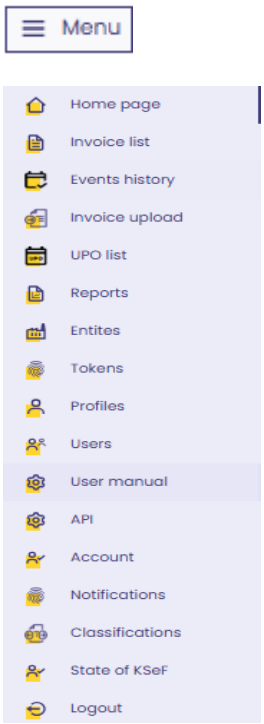
Below the list of rejected invoices, a list of the most recently registered documents in SKS is displayed. The list can be sorted by columns by clicking on the column headers. By default, the 10 most recent invoices are shown. Clicking anywhere on a row opens a preview of the selected invoice.

7.6. Footer

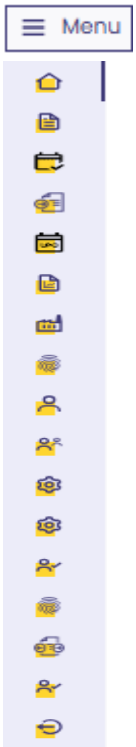


The footer contains the Exorigo-Upos logo, which links to the Exorigo-Upos homepage, as well as the Terms and Conditions, including the Privacy Policy (accessible by clicking on the text: Privacy policy) and the Portal Terms of Use (accessible by clicking on the text: Regulation). Using the SmartKSeF portal constitutes acceptance of the terms and the portal's privacy policy. Additionally, a fixed "Contact Us" text is displayed along with an email address.

8. Menu

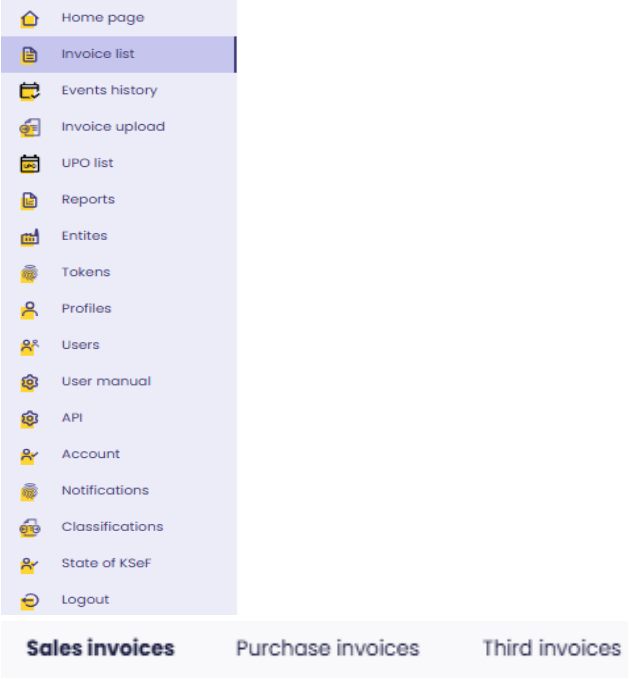


The Menu is always displayed in the upper left corner. By clicking the "Menu" button, users can toggle the visibility of the menu descriptions. Clicking on an icon navigates to the corresponding screen. Descriptions are visible by default.



When clicking on the Menu logo, only the icons remain visible. Hovering the mouse over an icon in the menu displays a tooltip with the name of the tab.

9. Invoice List



The invoice list is the main screen for working with documents, presenting:

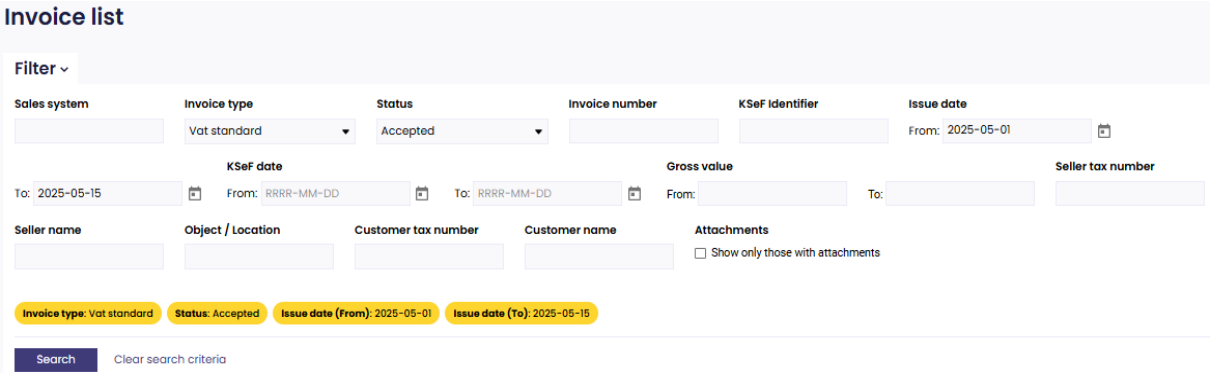
- Sales invoices – invoices where the logged-in NIP acts as the Seller (Entity 1),
- Purchase invoices – invoices where the logged-in NIP acts as the Buyer (Entity 2),
- Third-party invoices – invoices where the logged-in NIP acts as the third party (Entity 3).

Access to each tab is restricted to users with defined permissions. These tabs serve to group invoices by type, differentiate user permissions, and allow switching between the respective invoice types.

9.1. Invoice filtering

Above the invoice list, filtering options are available to narrow down the displayed invoices. The filter fields are editable (authorized users can enter values manually), except for the following: status and invoice type (selected from dropdown lists), date-related fields (selected from a calendar), and the "Show only with attachments" field (a checkbox). After selecting the filters, click the "Show Results" button.

Filtering varies depending on the type of invoices displayed. The search criteria are located above the "Show Results" button:

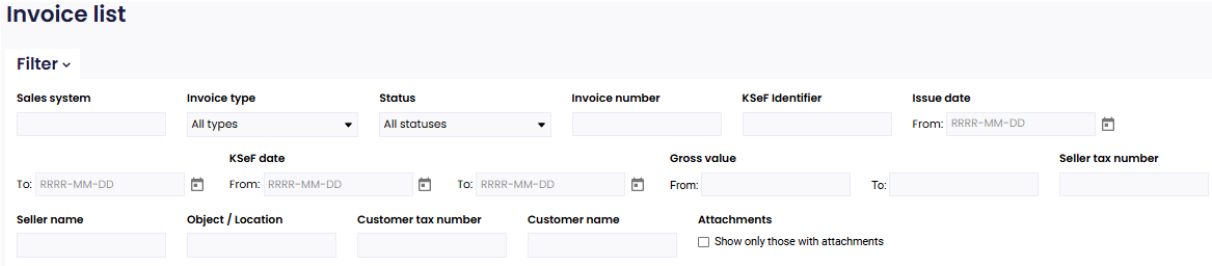


Clicking on the word "Filter" collapses the available filters to make it easier to view the invoice list.

To clear the applied filters, click on the text "Clear search criteria."

9.1.1. Filtering – Sales Invoices

Below are the filters available for the sales invoice list:



Available filters:

Filter Name	Field Type	Description
Sales System	Editable field	The system from which the invoice originates
Invoice Type	Single-choice dropdown list	Specific type of invoices to display
Status	Single-choice dropdown list	Five statuses related to invoice registration are available
Invoice Number	Editable field	Invoice number from the source system. After typing the first 3 characters, a dropdown with suggestions appears
Issue Date (from, to)	Editable field	Invoice issue date in the source system – range from, to plus option to select date from a calendar
KSeF Identifier	Editable field	Invoice identifier assigned by KSeF

KSeF Date (from, to)	Editable field	Date the invoice was registered and issued in KSeF – range from, to plus option to select date from a calendar
Gross Value (from, to)	Editable field	Total gross value of the invoice, specified with two decimal places
Seller's NIP	Editable field	Seller's Tax Identification Number. After typing the first 3 characters, a dropdown with suggestions appears
Seller's Name	Editable field	Name or identification details of the seller. After typing the first 3 characters, a dropdown with suggestions appears
Object / Location	Editable field	Place where the invoice was issued. After typing the first 3 characters, a dropdown with suggestions appears
Buyer's NIP	Editable field	Buyer's Tax Identification Number. After typing the first 3 characters, a dropdown with suggestions appears
Buyer's Name	Editable field	Name or identification details of the buyer. After typing the first 3 characters, a dropdown with suggestions appears
Attachments – Show only those with attachments	Checkbox	Filter invoices to show only those to which an attachment has been added

Invoice types:

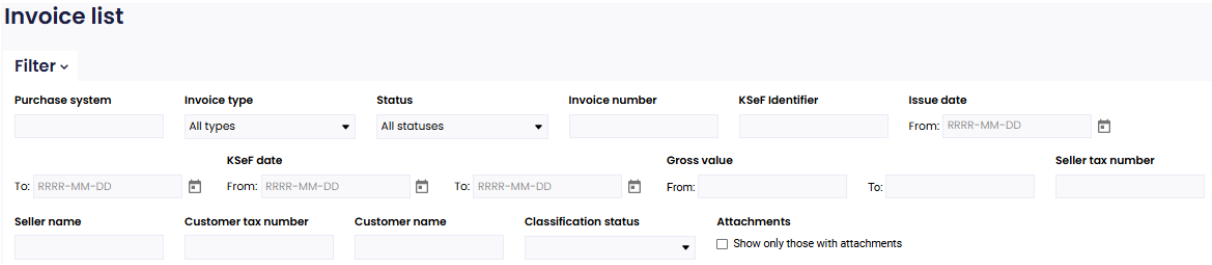
Document Type	**Description**
All Types	Filters all available invoice types
VAT Standard	Standard VAT invoice
VAT Simplified	Simplified VAT invoice
VAT Prepayment	VAT invoice with a prepayment, issued before the delivery of goods to document a partial or full advance payment, deposit, etc.
VAT Final	Final VAT invoice, issued after the delivery when a previously issued prepayment invoice does not cover the total payment
Correction Standard	Standard correction invoice

Correction Simplified	Simplified correction invoice
Correction Prepayment	Correction invoice related to a prepayment
Correction Final	Final correction invoice
Periodic Correction	Correction invoice for a period as described in Article 106j(3) of the VAT Act

Statuses:

Status Name	Status Description
Accepted	The invoice has been accepted in SmartKSeF.
Sent	The invoice has been successfully sent to KSeF; registration is pending.
Issued	The invoice has been registered in KSeF. This is the final status, indicating successful registration.
Rejected	The invoice was rejected either in SmartKSeF or in KSeF. This is the final status, indicating failed registration.
Confirmed	The invoice for which an official confirmation of receipt (UPO) has been obtained.

9.1.2. Filtering – Purchase Invoices



Available filters:

Filter Name	Field Type	Description
Purchase System	Text field	The system to which the invoice is assigned
Invoice Type	Single-select dropdown list	Specific type of invoices to be displayed
Status	Single-select dropdown list	Five statuses are available regarding invoice registration

Invoice Number	Text field	Invoice number from the source system
Issue Date (from, to)	Text field	Invoice issue date in the source system – a range is provided (from, to) with calendar date selection available
KSeF Identifier	Text field	Invoice identifier assigned by KSeF
KSeF Date (from, to)	Text field	Date of invoice registration and issuance in KSeF – a range is provided (from, to) with calendar date selection available
Gross Amount (from, to)	Text field	Total gross invoice amount, entered with two decimal places
Seller’s Tax ID (NIP)	Text field	Seller's tax identification number
Seller Name	Text field	Seller’s name or identifying details
Buyer’s Tax ID (NIP)	Text field	Buyer’s tax identification number
Buyer Name	Text field	Buyer’s name or identifying details. After entering the first 3 characters, a dropdown list with suggestions containing the phrase appears
Classification Status	Single-select dropdown list	Enables searching invoices based on three classification statuses: assigned, rejected, and unassigned
Attachments – Show only those with attachments	Checkbox	Filters invoices to show only those that have an attachment

Invoice types:

Document Type	**Description**
All Types	Filters all available invoice types
VAT Standard	Standard VAT invoice
VAT Simplified	Simplified VAT invoice
VAT Prepayment	VAT invoice with a prepayment, issued before the delivery of goods to document a partial or full advance payment, deposit, etc.
VAT Final	Final VAT invoice, issued after the delivery when a previously issued prepayment invoice does not cover the total payment
Correction Standard	Standard correction invoice

Correction Simplified	Simplified correction invoice
Correction Prepayment	Correction invoice related to a prepayment
Correction Final	Final correction invoice
Periodic Correction	Correction invoice for a period as described in Article 106j(3) of the VAT Act

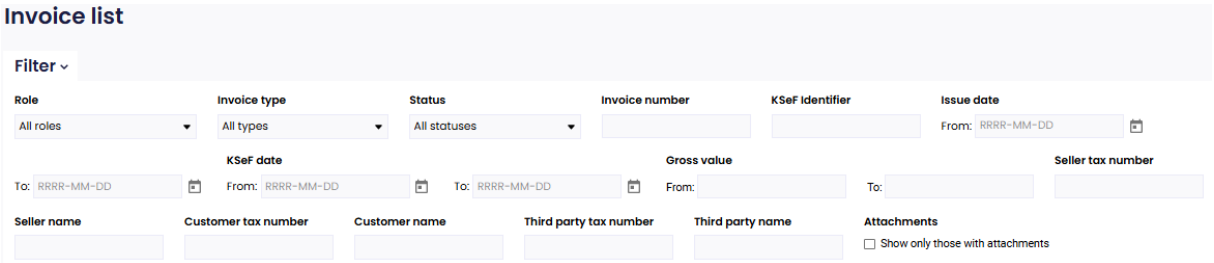
Statuses:

Status Name	Status Description
Accepted	The invoice has been accepted in SmartKSeF.
Sent	The invoice has been successfully sent to KSeF; registration is pending.
Issued	The invoice has been registered in KSeF. This is the final status, indicating successful registration.
Rejected	The invoice was rejected either in SmartKSeF or in KSeF. This is the final status, indicating failed registration.
Confirmed	The invoice for which an official confirmation of receipt (UPO) has been obtained.

Classification Status:

Status Name	Status Description
Assigned	Invoice assigned to the client's domain-specific system.
Rejected	Invoice rejected by the client.
Unassigned	Invoice not yet assigned to any of the client's domain-specific systems.

9.1.3. Filtering – Third-party invoices



Available filters:

Filter Name	Field Type	Description
Role	Single-select dropdown list	System to which the invoice is assigned
Invoice Type	Single-select dropdown list	Specific type of invoices to display
Status	Single-select dropdown list	There are five available statuses related to invoice registration
Invoice Number	Text input	Invoice number from the source system
Issue Date (from, to)	Text input + calendar picker	Invoice issue date in the source system – specify a range (from, to) with calendar selection option
KSeF Identifier	Text input	Invoice identifier assigned by KSeF
KSeF Date (from, to)	Text input + calendar picker	Date of registration and issuance of the invoice in KSeF – specify a range (from, to) with calendar selection option
Gross Amount (from, to)	Text input	Total gross amount of the invoice, entered with two decimal places
Seller's Tax ID (NIP)	Text input	Seller's tax identification number
Seller Name	Text input	Seller's name or identifying information
Buyer's Tax ID (NIP)	Text input	Buyer's tax identification number
Buyer Name	Text input with autocomplete	Buyer's name or identifying information. After entering the first 3 characters, a dropdown list with suggestions containing the phrase appears.
Attachments – Show only those with attachments	Checkbox	Filter invoices that have attachments
Third Party Tax ID (NIP)	Text input	Tax identification number of the third party – The column "Third Party Tax ID" will display the NIP of the first listed third party in the file, followed by "(*)". For example, the field may contain the value: 0123456789(*).
Third Party Name	Text input	Name or identifying information of the third party

Role:

Role	Description
All roles	Filtering by all available roles
Factor	Factor – when the invoice includes data of a factoring entity
Recipient	Recipient – when the invoice includes data of internal units, branches, or budgetary units separated within the buyer that do not themselves constitute the buyer under the legal definition
Original Entity	Original entity – when the invoice includes data of an entity that has been merged or transformed into the taxpayer and provided the service or delivered the goods. Excludes cases specified in Article 106j(2)(3) of the VAT Act (see Entity1K)
Additional Buyer	Additional buyer – when the invoice includes data of buyers other than the one listed in the Entity2 section
Invoice Issuer	Invoice issuer – when the invoice includes data of the entity issuing the invoice on behalf of the taxpayer. Not applicable when the issuer is the buyer
Payer	Payer – when the invoice includes data of an entity settling the payment obligation instead of the buyer
LGU – Issuer	Local Government Unit as the VAT invoice issuer, provided the entity performs taxable activities as part of its business (as defined in the VAT Act)
LGU – Recipient	Local Government Unit as the buyer of goods or services, where the invoice must be issued to the LGU in accordance with VAT regulations
VAT Group Member – Issuer	Issuer – VAT invoice is issued to the VAT group as the seller, with an optional indication of the member actually performing the transaction
VAT Group Member – Recipient	Recipient – for VAT purposes, the entire VAT group is considered the buyer
Other Role	

Invoice types:

Document Type	Description
All Types	Filters all available invoice types
VAT Standard	Standard VAT invoice
VAT Simplified	Simplified VAT invoice
VAT Prepayment	VAT invoice with a prepayment, issued before the delivery of goods to document a partial or full advance payment, deposit, etc.
VAT Final	Final VAT invoice, issued after the delivery when a previously issued prepayment invoice does not cover the total payment
Correction Standard	Standard correction invoice
Correction Simplified	Simplified correction invoice
Correction Prepayment	Correction invoice related to a prepayment
Correction Final	Final correction invoice
Periodic Correction	Correction invoice for a period as described in Article 106j(3) of the VAT Act

Statuses:

Status Name	Status Description
Accepted	The invoice has been accepted in SmartKSeF.
Sent	The invoice has been successfully sent to KSeF; registration is pending.
Issued	The invoice has been registered in KSeF. This is the final status, indicating successful registration.
Rejected	The invoice was rejected either in SmartKSeF or in KSeF. This is the final status, indicating failed registration.
Confirmed	The invoice for which an official confirmation of receipt (UPO) has been obtained.

9.2. Invoice list

Below the invoice list, the following tabs are available:

- Sales Invoices

- Purchase Invoices
- Third-Party Invoices

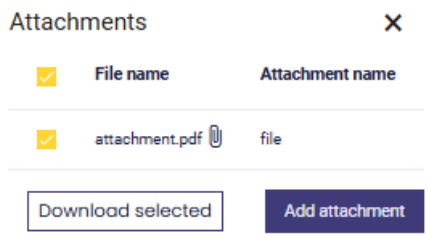
Each tab allows sorting by clicking on the column header. By default, the list is sorted by the *Invoice Date*, with the most recent invoices shown at the top.

The following actions are available on each tab:

- Select all invoices in the list by using the checkbox in the first column,
- Select individual invoices,
- Preview an invoice by clicking anywhere on the record (except the first column),
- Copy the invoice number or KSeF ID by clicking the corresponding icon

The Invoice List view is for informational purposes and may change

For invoices with an attachment, an icon is displayed in the Attachments column. By clicking the icon, the user can download or add an attachment. To download an attachment, select the checkbox in the corresponding row, then click the active "Download selected" button. To download all available attachments in the view, click the checkbox in the header row. The "Add attachment" button allows you to add an attachment to the invoice.



The Attachments view is for informational purposes and may change

Columns – Sales Invoices:

No.	Column Name	Description
1	Sales System	System from which the invoice originates
2	Invoice Type	Type of invoice or invoice correction
3	Invoice Number	Invoice number assigned in the source system
4	Issue Date	Date the invoice was issued in the source system

5	KSeF Identifier	KSeF ID assigned upon successful registration of the invoice/correction
6	KSeF Date	Date of invoice/correction registration in KSeF
7	Seller Tax ID (NIP)	Seller's Tax Identification Number
8	Seller Name	Full or short name of the seller's company
9	Facility / Location	Location where the invoice was issued
10	Buyer Tax ID (NIP)	Buyer's Tax Identification Number identifying the customer
11	Buyer Name	Full or short name of the buyer's company
12	Currency	Currency in which the invoice is issued
13	Gross Amount	Total transaction amount including VAT
14	VAT Total	Total VAT amount included in the transaction
15	Net Amount	Transaction amount excluding VAT
16	Status	Current status of the invoice in the SmartKSeF system
17	Attachments	Additional files or documents associated with the invoice

Columns – Purchase Invoices:

No.	Column Name	Description
1	Purchase System	System to which the invoice is assigned
2	Invoice Type	Type of invoice or invoice correction
3	Invoice Number	Invoice number assigned in the source system
4	Issue Date	Date the invoice was issued in the source system
5	KSeF Identifier	KSeF ID assigned upon successful registration of the invoice/correction
6	KSeF Date	Date of invoice/correction registration in KSeF
7	Seller's Tax ID (NIP)	Seller's Tax Identification Number
8	Seller Name	Full or short name of the seller's company
10	Buyer's Tax ID (NIP)	Buyer's Tax Identification Number identifying the client
11	Buyer Name	Full or short name of the buyer's company
12	Currency	Currency in which the invoice is issued
13	Gross Amount	Total transaction amount including VAT
14	VAT Total	Total VAT amount included in the transaction

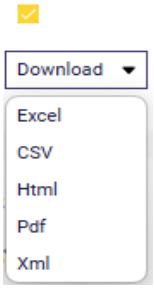
15	Net Amount	Transaction amount excluding VAT
16	Status	Current status of the invoice in the SmartKSeF system
17	Attachments	Additional files or documents associated with the invoice

Columns – Third Invoices:

No.	Column Name	Description
1	Role	Possible roles of the logged-in Tax ID
2	Invoice Type	Type of invoice or invoice correction
3	Invoice Number	Invoice number assigned in the source system
4	Issue Date	Date the invoice was issued in the source system
5	KSeF Identifier	KSeF ID assigned upon successful registration of the invoice/correction
6	KSeF Date	Date of invoice/correction registration in KSeF
7	Seller Tax ID (NIP)	Seller's Tax Identification Number
8	Seller Name	Full or short name of the seller's company
9	Facility / Location	Information about the place assigned to the transaction (store or office location)
10	Third Party Tax ID (NIP)	Tax Identification Number of the entity acting as Third Party. The column displays the first NIP from third parties listed in the file, with the suffix "*()" appended, e.g., "0123456789(*)".
11	Third Party Name	Full or short name of the entity acting as Third Party
12	Buyer Tax ID (NIP)	Buyer's Tax Identification Number identifying the customer
13	Buyer Name	Full or short name of the buyer's company
14	Currency	Currency in which the invoice is issued
15	Gross Amount	Total transaction amount including VAT
16	VAT Total	Total VAT amount included in the transaction
17	Net Amount	Transaction amount excluding VAT
18	Status	Current status of the invoice in the SmartKSeF system
19	Attachments	Additional files or documents associated with the invoice

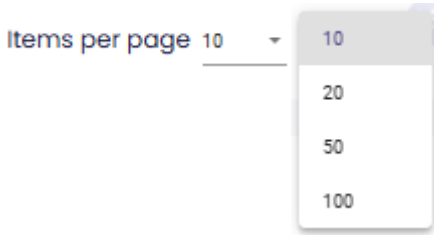
Below the invoice list, there is a disabled button:

Once the user selects an invoice from the list using the checkbox, the **“Download”** button becomes active and allows the user to download the selected invoice(s) in their chosen format. The available formats are: **Excel, CSV, HTML, PDF, XML**



9.2.1. Navigation

The user can choose the number of records displayed per page using a dropdown list (with options to display 10, 20, 50, or 100 rows per page).



The list of pages is paginated. Using the navigation buttons, the user can move the view to the **first**, **previous**, **next**, or **last** page.

9.3. Manual Assignment of Purchase Invoices to the Client's Domain (External) System

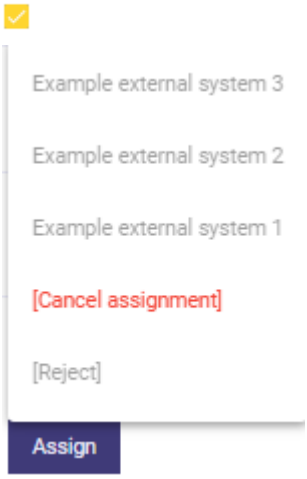
The user can manually perform the following actions from the *Purchase Invoices* tab:

- **Assign** a purchase invoice to a specific client system,
- **Reject** an invoice that has not been assigned to any external client system,
- **Cancel** an invoice that has already been assigned.

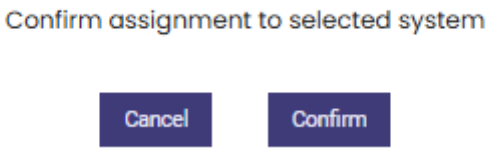
These options are available **only for invoices that have not been automatically classified** based on the classification rules defined in section 21. Classification

9.3.1. Assignment of the invoice(s) to the external system

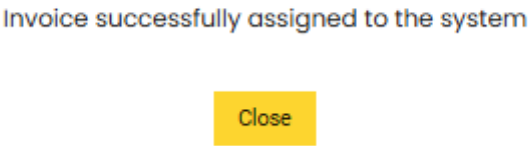
In the Purchase Invoices tab, there is an inactive button. Once an invoice or multiple invoices are selected from the list using the checkbox, the button will become active. At that point, a user with the appropriate permissions will be able to assign the invoice to the selected domain system:



When the user selects the system to which they want to assign the invoice, a pop-up will appear:

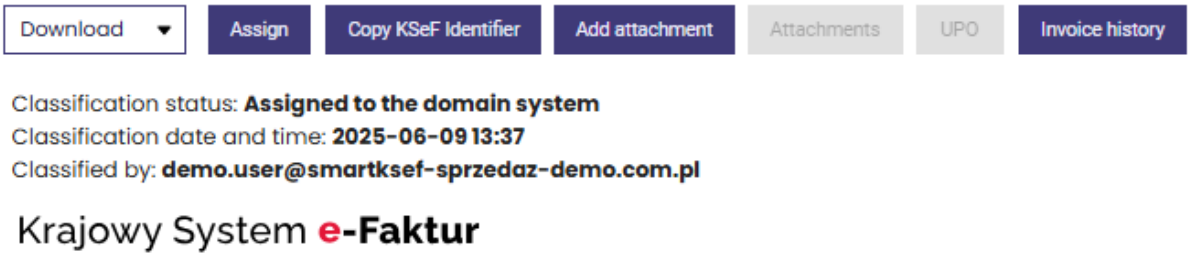


After confirmation, a pop-up will appear with information about the invoice being assigned to the selected system:



In the invoice preview, the user will be able to see information about:

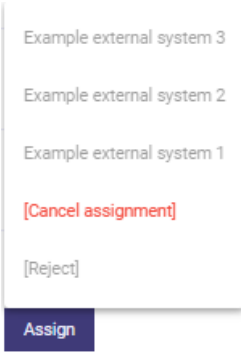
- the classification status,
- the date and time of classification,
- the assigned system,
- the person who classified the invoice.



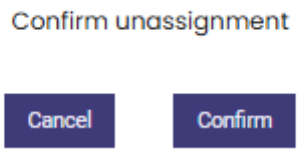
The Invoice preview is for informational purposes and may change

9.3.2. Cancellation of the assignment of an invoice already assigned to an external system.

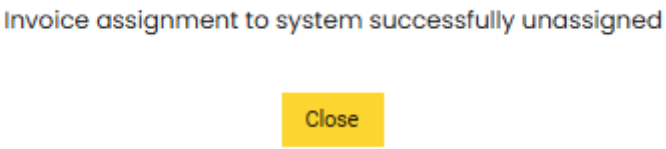
Selecting an **assigned** or **rejected** invoice and pressing the *Assign* button will only allow the user to cancel the previously assigned invoice. The field with the system name and the Reject field will be turned off.



After selecting the *Cancel assignment* option, a pop-up will appear with the following message:



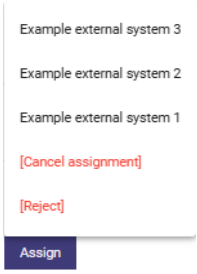
After confirming the operation, a pop-up will appear with information about the cancellation of the invoice assignment:



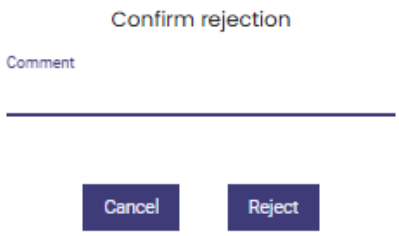
In that case, the invoice preview will not display the information that is visible when the invoice is classified with a system.

9.3.3. Rejection of an invoice not classified to any system

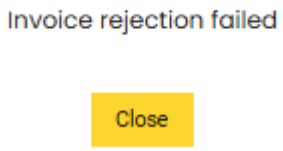
Selecting an invoice that has not yet been assigned to any external system allows the user to reject that invoice.



After selecting the *Reject* option, a pop-up will appear where the user must enter a comment explaining the reason for rejecting the invoice in order to proceed:



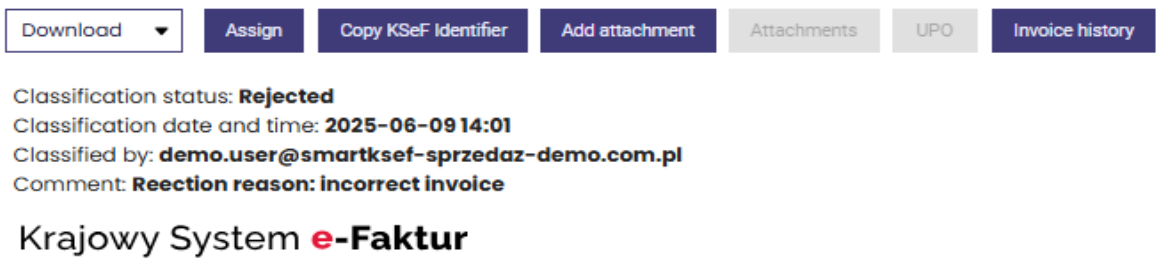
If the user does not fill in the Comment field and clicks the Reject button, the application will not perform the invoice rejection operation.



After filling in the Comment field and clicking the Reject button, a pop-up will appear with the following information:

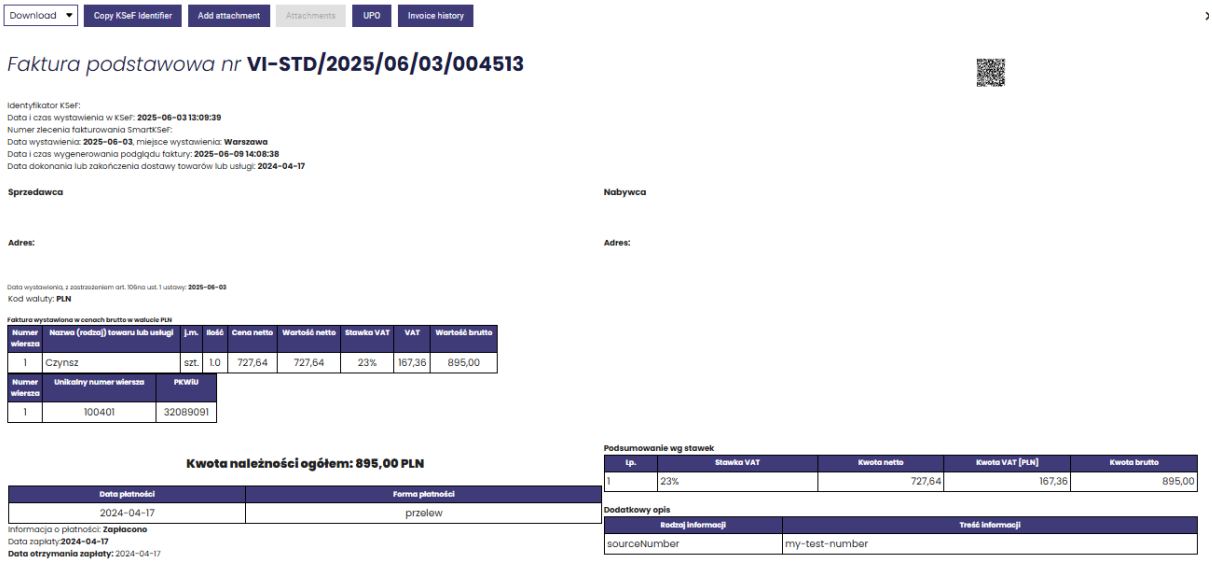
In the invoice preview, the user will be able to see information about:

- the classification status,
- the date and time of classification,
- the person who classified the invoice,
- the comment (entered when selecting the Reject option).



9.4. Invoice preview in the invoice list

When the user clicks on a record anywhere (except for the first column with checkboxes and the last column with Attachments if any attachments are assigned to the invoice), the invoice preview will open:



Preview of a sample sales invoice

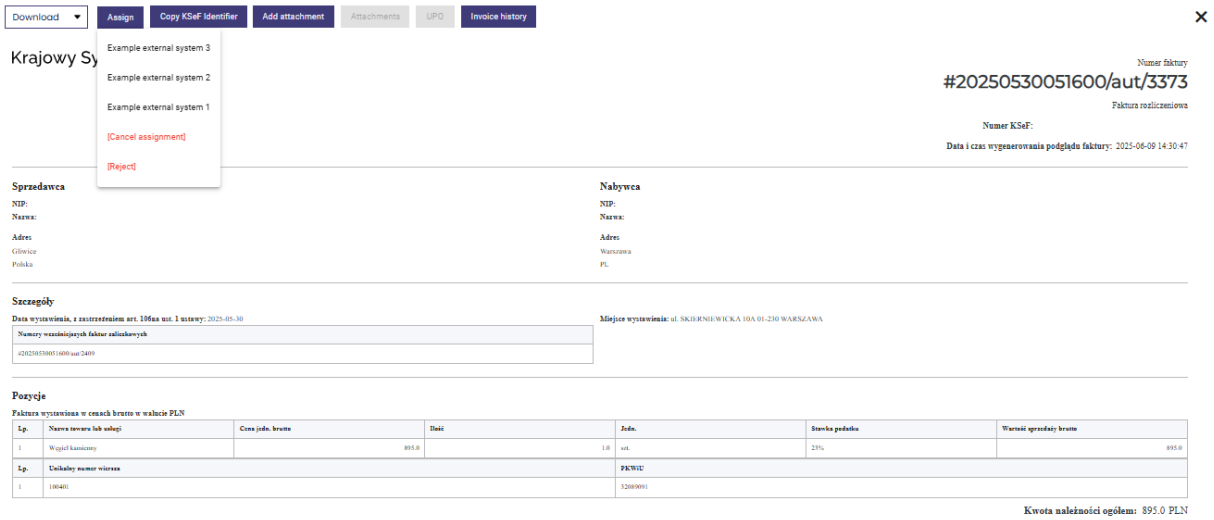
In the top left corner, there are five or six buttons depending on the invoice status. For the status "Issued," there are six buttons. When the invoice status is “Confirmed,” it is possible to download the UPO (the UPO button will be enabled, not greyed out).

In other cases, there are five buttons:

- **Download** – allows downloading the invoice in a selected format. Available formats: XML, HTML, PDF, JSON
- **Copy KSeF Identifier** – allows copying the KSeF ID to the user’s clipboard
- **Add Attachment** – enables adding an attachment to the invoice
- **Attachments** – see: 9.3.1. Attachments
- **UPO** – see: 9.3.2. UPO
- **Invoice History** – see: 9.3.3. Invoice History

In the case of purchase invoices, a seventh button is available: 

This button allows the user to manually assign, cancel, or reject an invoice that has not been automatically classified to any external client system (see: 9.3. Manual assignment of purchase invoices to the client’s domain (external) system and 21. Classifications).



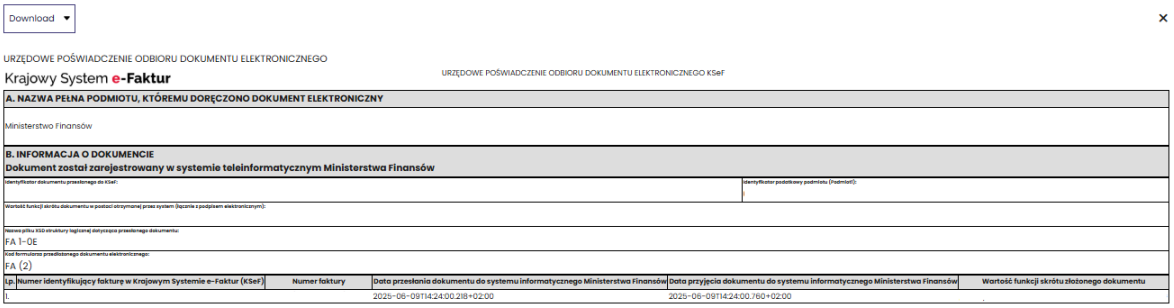
9.4.1. Attachments

If no attachments have been added to the invoice, the icon appears as follows

and is inactive. When attachments are associated with the invoice, the icon is active and looks like this: 
Clicking on this icon opens a screen identical to the one displayed when clicking the icon in the invoice list (described in the previous section).

9.4.2. UPO

UPO is generated for a single invoice and is downloaded after the invoice is registered in KSeF. After downloading the UPO, the invoice status changes to "Confirmed." There is also the possibility to generate an UPO for all invoices issued in a given SmartKSeF – KSeF communication session. The UPO can cover multiple invoices and is downloaded from KSeF after the invoice registration session is closed. Until it is downloaded, the UPO icon remains inactive.



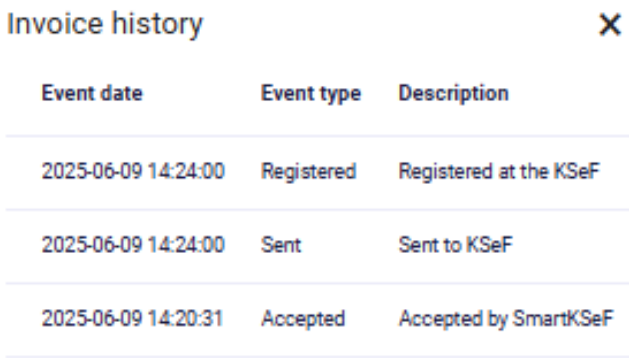
In the top left corner, there is a Download icon that allows downloading the UPO. When clicked, a dropdown menu appears with three formats: XML, HTML, PDF. The user selects one of the formats, and the download begins.

9.4.3. Invoice history

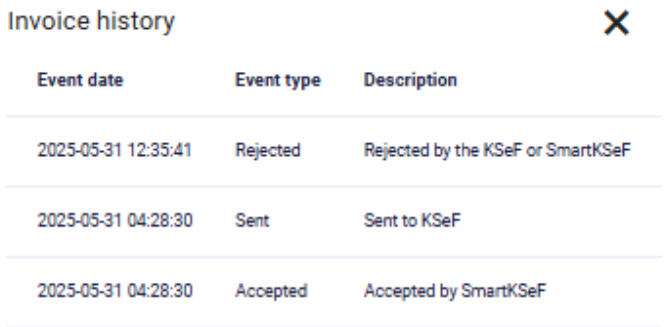
The icon 
relates to the history of the invoice issuance process. It displays the date of the event, the type of event, and a description of the event. The possible invoice statuses are:

No.	Status Name	Status Description
1	Accepted	The invoice has been validated and accepted in SmartKSeF.
2	Sent	The invoice has been successfully sent to KSeF and is awaiting registration.
3	Issued	The invoice has been registered in KSeF. This is the final status; registration was successful.
4	Rejected	The invoice was rejected in SmartKSeF or in KSeF. This is the final status; registration failed.

Sample screen – Invoice History:



In the case of a rejected invoice registration in KSeF or SmartKSeF, the invoice history appears as follows:



9.5. Anonymous Access to the Invoice
